Attention: Tom Clinton, CEO

Dear Tom,

I am writing to you to deliver some feedback on the recent work completed by AQUIS on several HVAC units at Rhode Island Hospital.

As a responsible service provider, Rhode Island Hospital takes pride in providing the healthiest possible environment for our patients, visitors and staff. You will not be surprised therefore that I take great comfort in knowing that the AQUIS system allows our condensate pans to remain virtually maintenance free for many years to come. This adds up to a safer and healthier environment for everyone.

Rhode Island Hospital deals with numerous HVAC issues daily. Initially, our intention was to use your AQUIS-CPR-1 system to remediate a leakage problem in a particular unit. The improvements in appearance and performance of our rehabilitated HVAC units are obvious. By installing the AQUIS system in additional units, I am convinced that not only has it provided a cost effective solution to the initial problem, but anticipate that it will prevent the occurrence of many future issues inherent in un-treated HVAC units.

In further consideration of the obvious financial constraints imposed upon any fiscally responsible institution, I appreciate the overall value afforded by the AQUIS solution. True innovations like the AQUIS system that can help our business in many aspects of its operations while rare, prove very cost effective.

In closing, the professionalism exhibited by your company in working with our team was excellent. I wish you all the best with your innovative technologies, and I look forward to working with your company on future products and solutions.

Sincerely,

A handwritten signature in black ink that reads "Jeffrey O. Chalut".

Jeffrey O. Chalut

Director, Engineering & Maintenance
